

BASIC SIGHT-SINGING AND EAR TRAINING FOR CHURCH SINGERS

FORM ANALYSIS EXERCISES 7.1

ADDITIONAL RESOURCES FOR STICHERA TONES

You can find additional, more detailed analysis of the Stichera Tones in “Common” (Obikhod) Chant and Kievan Chant in the Music Section of the OCA website: <https://www.oca.org/liturgics/learning-the-tones> Analysis is provided using different sample texts and a slightly different way of indicating the phrases (letters, instead of numbers). SOL-FA syllables are provided as well.

Here you will also find audio tracks for the various voice parts — Soprano, Alto, Tenor, and Bass — singing the texts covered in the tutorials. You may want to use these as a way of checking the accuracy of your singing.

INSTRUCTIONS FOR FORM ANALYSIS EXERCISES 7.1

1. Print out each of the PDF files that are linked on the following page. These are the source pages for the slides in Unit 7.1.
2. For each Tone, analyze, identify, and mark:
 - a. The **macrostructure** of the hymn, using Arabic numerals to denote distinct patterns of pitches, for example, 1, 2, 1, 2, etc. or 1, 2, 3, 1, 2, 3. A Tone can have as many as **five** distinct patterns.
 - b. The **microstructure** of each phrase, marking the “beginning,” the “reciting tone,” and the “ending” with a horizontal bracket, and label them accordingly. Check your work against the slides in Unit 7.1.
 - c. Scan or photograph your completed work and email it to OCATeacher1@oca.org.
 - d. Write in the SOL-FA syllables for each Tone, practice and record yourself singing each one.
